DETAILED ACTION

Allowable Subject Matter

1. Claims 1-10 allowed.
2. Claims 12 and 15-17 objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claim 14 rejected under 35 U.S.C. 103(a) as being unpatentable over Hirabayashi et al. (6,766,082) in view of Uno et al. (6,406,196) further in view of Nakai et al. (6,686,044)

Regarding Claim 14, Hirabayashi et al. disclose a waveguide type optical device and manufacturing method therefor where optical structure 1-4 is embedded in ceramic substrate 1-1 inside a trench formed inside ceramic substrate 1-1. Hirabayashi et al. fail to disclose the required makeup of the optical structure/fiber and the required calcium and hexane coating. However, Uno et al. disclose an optical device and method for producing the same where in Figs 2 and 3, the required makeup of the optical structure/fiber is disclosed. Furthermore, Nakai et al. disclose surface-coated calcium carbonate particles and method for manufacturing the same where in column 7 the required calcium and hexane coating is disclosed.

Art Unit: 2826

It would have been obvious to one of having ordinary skill in the art at the time the invention was made to include the required makeup of the optical material and calcium and hexane coating in Hirabayashi et al. as taught by Uno et al. and Nakai et al. respectively, in order to have an optical semiconductor device with increased performance.
